

CLARC – Cleanup Levels and Risk Calculations database, Washington State Department of Ecology
 ARAR – applicable, relevant and appropriate requirements

2.7.3.2 GROUND WATER POINT OF COMPLIANCE

The point of compliance for ground water with respect to surface water is the point of discharge into Admiralty Inlet. However, the point of compliance with respect to soil vapor is throughout the Site, i.e., throughout the volume of contaminated ground water. This more stringent point of compliance governs for the Site.

2.8 AREAS AND MEDIA REQUIRING CLEANUP

2.8.1 SUMMARY OF CLEANUP STANDARDS

The following table summarizes selected cleanup levels and points of compliance for the Site.

Table 2.8-1
Summary of Cleanup Levels and Points of Compliance

CUL Source	GRO	DRO	ORO	Benzene	Toluene	Ethyl-benzene	Xylenes
Soil mg/Kg	30	200	200	.03	7	6	9
Air ug/m ³	none	none	none	.32	2,200	460	46
Ground Water ug/L	800	500	500	5	1,000	700	1,000
Point of Compliance	Soil	Throughout the Site					
	Air	Ambient air throughout the Site (including indoor air)					
	Ground Water	Throughout the Site					

Table Note

Refer to Tables 2.7-1, 2.7-2, and 2.7-3 for cleanup level sources

2.8.3 AREAS OF SOIL REQUIRING CLEANUP
